EFFECTIVE SPACE ZONING

Effective space zoning is one of the key aspects of creating a comfortable and functional environment in any room. By properly dividing the space into separate zones, it is possible to achieve optimal use of the area and create a harmonious combination of various functions.

Sliding partitions and stationary aluminum structures are excellent solutions for achieving optimal zone distribution, providing flexibility and comfort in the use of the space.

Sliding partitions allow for adjustments to the layout of the space depending on current needs. With their help, different zones can be created by dividing the room into separate parts or, conversely, combining them to achieve a more spacious atmosphere. These partitions are highly mobile and easy to move, enabling quick adaptation of the space to suit any situation.

Stationary aluminum structures, on the other hand, offer strength and reliability, making them an ideal choice for permanent space division. They help create cozy and functional zones while maintaining an open and spacious appearance. Thanks to the use of aluminum profiles, these structures are lightweight and aesthetically appealing, making them an excellent solution for any interior design.

Stationary Structure
Sliding Door Model 1AG
Profile - Matte Black
Glass - Transparent Triplex
Handle - Bar Handle Matching
Profile Color

The solution is used for dividing:
• Kitchen and living room
• Living room and bedroom
• Children's room and bedroom

Stationary Structure
Swing Door Model 1AG
Profile - Matte Black
Glass - Transparent Triplex

The solution is used for:
• Space division in the bedroom

Stationary Structure
Hinged Door Model 1AG
Profile - Matte Black
Glass - Transparent Triplex

The solution is used for:

- Dividing office space in commercial interiors
- Creating a study area in private interiors

Stationary Panel
Model 1AG
Profile – Matte Black
Glass – Black Tinted Triplex

The solution is used for dividing the bathroom into zones.

Folding System "Accordion"
Model 1AG
Profile – Matte Black
Glass – Transparent Triplex

The solution is used for dividing:

- Kitchen - Living Room
- Living Room - Bedroom
- Study - Living Room
- Bedroom - Study

Folding System "Harmonic"
Model 1AG
Profile – Matte Black
Glass – "Purple Spy"

The solution is used for creating a walk-in closet.

Opening System "Pivot"
Model 13AG
Profile – Matte Black
Glass – Transparent Triplex

The solution is used in interiors for designing large doorways:
• Living Room
• Hall
• Entryway

CONCEPTUAL SPACE DIVISION

In the world of design and interiors, new opportunities emerge daily to expand the applications of door panels. Freestanding panels, in particular, create an impressive effect, making them ideal for visual zoning and room decoration.

There is no longer a need to limit yourself to standard uses of door panels. Now, they can serve as an additional decorative accent in the interior, bringing a unique atmosphere to any space. Freestanding panels offer the opportunity to create unique design solutions that stand out visually and draw attention.

These panels effectively emphasize the importance of spatial planning and allow for the division of a room into various functional zones. This is especially relevant in open-plan layouts. Freestanding panels are an excellent solution for zoning spaces while maintaining a sense of openness and freedom.

Stationary Panel
Model 4AG
Profile – Matte Black
Glass – Transparent Triplex

The solution is used for decorative and functional room zoning:
• Kitchen and Living Room

Stationary Structure

Model 4AC
Profile – White
Glass – Transparent Triplex
Author – Evgeniya Aborina
Project – "FUSION"

The solution is used for decorative and functional zoning of a bedroom into relaxation and storage areas.

STATIONARY STRUCTURES

Stationary structures have become an essential element in modern interiors. Their functionality and aesthetics allow for the creation of stylish spaces where strength and transparency are harmoniously combined. They enable the design of environments where the boundary between interior and exterior blurs, giving interior solutions new dimensions.

These structures stand out for their high quality and reliability. Not only do they withstand operational loads, but they are also highly durable.

They are both lightweight and strong, allowing for monumental yet minimalist designs. Thanks to their stability, aluminum enables the creation of large spans without the need for additional support elements.

An important aspect is the wide range of design and color options offered by ProfilDoors.

FACADE DESIGN

Aluminum panels are a modern and practical solution for the facade design of wardrobes and closets. The advantages of aluminum panels are clear: they are lightweight, durable, and long-lasting. Thanks to their construction, they do not deform under external factors such as temperature fluctuations or humidity. Additionally, aluminum is a material resistant to corrosion, making it ideal for use in humid environments.

It is also worth noting that aluminum panels come in a wide range of profile and glass colors, allowing for the creation of design solutions that suit any interior and style.

A significant advantage of aluminum panels is their functionality. They are easy to open and close, providing convenient access to items stored in wardrobes.

Finally, it is important to highlight that aluminum panels are an environmentally friendly material that can be recycled and reused. This makes them not only aesthetically appealing but also compliant with the latest environmental standards.

Thus, the use of aluminum panels in the facade design of wardrobes and closets embodies modernity, style, and practicality. Thanks to their advantages, they are becoming an increasingly popular material among designers and property owners.

Sliding Partition Cascade

INTERIOR UNITY AND DECORATIVE UNIQUENESS

Interior unity lies in the smallest details—from the color palette to geometric shapes. By carefully selecting each element, we create a sense of complete harmony and cohesion within the overall interior concept.

Our signature feature is decorative uniqueness. With ProfilDoors constructions, you can easily give each space its own distinctive character and individuality. Beautiful door panels become a stylish decorative element, reflecting the personality and tone of the interior.

A stationary panel with a mirror in the same finish as the doors is not only an elegant decorative solution but also a practical element for the home. It allows for a quick appearance check before heading out and adds light and a sense of space to narrow areas. The unified design emphasizes the harmony and coherence of the entire space.
